Hi, Michelle.

Yes, we are still at on track to commence the PDI soil borings inside the Washington Plant building the week of Mar 5th, although on Monday Mar 5th we still may be setting up drill rigs and equipment exhaust hosing, etc. So, we may not be in a position to collect samples until Mar 6 or 7. We will keep you posted on details as we approach this date.

Our sampling teams will have the requested sample ware, including ice.

Hi, Bruce-

Hope you had a nice extended weekend!

The USACE has asked me to confirm the following with the you:

1. PDI start: Are we on track to start wk of March 5th and approximate work hours (e.g., M-F, 2pm-10pm)
2. PRP will provide all split sample bottles and will collect split sample based on USACE discretion. This includes:
 - a. bottles for up to 100 split samples or at least 10% of all soil samples.
 - b. Our CLP lab requested the following for each sample: 2 VOA vials with 5 g soil and 5 mL methanol per vial and 1 Vial - Dry (filled with soil, no headspace) for moisture content.
3. Do you have ability to provide ice?

Please let me know if you have any questions.

Best,
Michelle-
